

HYDROPLATE HOT WATER SYSTEM

HYDROPLATE

This Eberspächer Hydroplate system is suitable for installation into Motorhome, Caravan, Welfare, Utility and Messing vehicle applications.

It utilises either a separate diesel fuel tank or the vehicles own diesel tank. It also requires a 12V DC power supply.

The Hydroplate system is generally used when stationary, but can be used whilst on the move.

Once installed all you need to do is switch it on and after approximately 10–15 minutes, the Hydroplate produces a constant flow of hot water at 40°C, to be used for washing and showering.

The continuity of hot water supply is dependent on the flow rate of the domestic water pump, ideally being between 5 and 10 litres per minute.

We can offer optional fan matrix units, that can be used to supply ducted hot air dependent on the specific application.

We would welcome the opportunity to discuss your specific requirements in more detail.

TECHNICAL DATA:

HEATER		HYDRONIC HS3D5E	
Heating Medium		Water, Cooling Fluid	
Control of the Heat Flow		Large	Small
Heat Flow (Watt)		5,000 W	1,300 W
Fuel Consumption (Litres/hour)		0.59 l/h	0.15 l/h
Mean Electrical Power (Watt)	In Operation	32 W	5 W
	At Start	135 W	
Rated Voltage (Volt)		12 V	
Optimum Water Flowrate (Litres/minute)		5-10 l/m	

Heating Circuit
(standard)

Heating Circuit
(without fan matrix)

1. Blender Valve
2. Hot water output to domestic tap
3. Cold water input from storage tank (via pump)
4. HS3 Water Heater & Water Pump (fitted externally)
5. Water Hose (modified as required)
6. Fan Matrix (optional)
